PCO. Edge 4.2 LT
Scientific CMOS Camera

- High resolution: 2048 x 2048 pixel
- Low noise: 0.8 electrons
- High speed: 40 fps
- High dynamic range: 37500:1
- High quantum efficiency: up to 82%
- USB 3.0
- Small form factor
features

Selectable rolling shutter operation modes of pco.edge cameras.

rolling shutter readout modes – optimized for synchronization of microscopes and scanning applications

All pco.edge sCMOS cameras from the beginning feature a variety of precise synchronization modes, which are optimized for advanced microscopy imaging and scanning. The flexible frame and line triggers with very low latency in combination with the free selectable readout modes can easily be combined to cover every modern microscopy situation to name a few:

- lightsheet microscopy
- selective plane imaging microscopy (SPIM)
- structured illumination microscopy
- localizations microscopy (GSD, PALM, STORM, dSTORM)
- spinning disk confocal microscopy
- RESOLFT

For example, one mode is used in a lightsheet or SPIM application, the lower right rolling shutter operational mode “single top down” operation is convenient to properly synchronize the camera exposure with the scanner. On the other hand, if speed is required and a flash like exposure is applied the upper left mode “dual outside in” is used for localization microscopy techniques like GSD, PALM or STORM.
superior image quality
The pco.edge sCMOS camera features outstanding low readout noise. Even at maximum speed of 40 frames/s at full resolution of 2048 x 2048 pixel the noise is 0.8 e⁻ med. Moreover the pco.edge provides an excellent homogeneous pixel response to light (PRNU, photo response non-uniformity) and an excellent homogeneous dark signal pixel behaviour (DSNU, dark signal non-uniformity), which is achieved by a sophisticated electronic circuit technology and firmware algorithms.

The lower figure shows a comparison of a scientific grade CCD and the new pco.sCMOS image sensor under similar weak illumination conditions. This demonstrates the superiority of sCMOS over CCD with regards to readout noise and dynamic, without any smear (the vertical lines in the CCD image).

flexibility and free of latency
User selectable choice of rolling shutter modes for exposure provides flexibility for a wide range of applications. The advantages of rolling shutter are high frame rates and low readout noise. Due to real time transmission of the image data to the PC, there is no latency between recording and access or storage of the data.

37 500:1 dynamic range
Due to the excellent low noise and the high full well capacity of the sCMOS image sensor an intra scene dynamic range of better than 37 500 : 1 is achieved. A unique architecture of dual column level amplifiers and dual 11 bit ADCs is designed to maximize dynamic range and to minimize readout noise simultaneously. Both ADC values are analyzed and merged into one high dynamic 16 bit value.
### Technical Data

#### Image Sensor
- **Type of Sensor**: Scientific CMOS (sCMOS)
- **Image Sensor**: CIS202A
- **Resolution (h x v)**: 2048 x 2048 active pixel
- **Pixel Size (h x v)**: 6.5 µm x 6.5 µm
- **Sensor Format / Diagonal**: 13.3 mm x 13.3 mm / 18.8 mm
- **Shutter Modes**: Rolling Shutter (RS) with free selectable readout modes, global reset - rolling readout (GR)
- **MTF**: 76.9 lp/mm (theoretical)
- **Fullwell Capacity (typ.)**: 30 000 e-
- **Readout Noise**: \(0.8 \text{median}/1.3 \text{rms} \text{e-}\)
- **Dynamic Range (typ.)**: 37 500 : 1 (91.5 dB)
- **Quantum Efficiency**: Up to 82 % @ peak
- **Spectral Range**: 370 nm .. 1100 nm
- **Dark Current (typ.)**: < 0.8 e-/pixel/s @ 10 °C
- **DSNU**: < 0.3 e- rms
- **PRNU**: < 0.2 %
- **Anti Blooming Factor**: > 10 000

#### Frame Rate Table
<table>
<thead>
<tr>
<th>Resolution</th>

#### Camera
- **Frame Rate**: 40 fps
  - @ 2048 x 2048 pixel
- **Exposure / Shutter Time**: 100 µs .. 10 s RS
  - 30 µs .. 2 s GR
- **Dynamic Range A/D**: 16 bit
- **A/D Conversion Factor**: 0.46 e-/count
- **Pixel Scan Rate**: 110.0 MHz
- **Pixel Data Rate**: 220.0 Mpixel/s
- **Binning Horizontal**: x1, x2, x4
- **Binning Vertical**: x1, x2, x4
- **Region of Interest (ROI)**:
  - Horizontal: steps of 4 pixels
  - Vertical: steps of 1 pixel
- **Non-linearity**: < 0.6 %
- **Cooling Method**: +10 °C stabilized, peltier with forced air (fan)
  - (up to 27°C ambient)
- **Trigger Input Signals**: Frame trigger, programmable input (SMA connectors)
- **Trigger Output Signals**: Exposure, busy, line, programmable output (SMA connectors)
- **Data Interface**: USB 3.0
- **Time Stamp**: In image (1 µs resolution)

#### General
- **Power Supply**: 12 .. 24 VDC (+/- 10 %)
- **Power Consumption**: 21 W max. (typ. 12 W @ 20 °C)
- **Weight**: 900 g
- **Operating Temperature**: +10 °C .. + 40 °C
- **Operating Humidity Range**: 10 % .. 80 % (non-condensing)
- **Storage Temperature Range**: -10 °C .. + 60 °C
- **Optical Interface**: F-mount & C-mount
- **CE / FCC Certified**: Yes

---

1. The readout noise values are given as median (med) and root mean square (rms) values, due to the different noise models, which can be used for evaluation. All values are raw data without any filtering.
2. Max. fps with centered ROI.
3. The high dynamic signal is simultaneously converted at high and low gain by two 11 bit A/D converters and the two 11 bit values are sophistically merged into one 16 bit value.

monochrome

F-mount and C-mount lens changeable adapter.

All dimensions are given in millimeter.
**technical data**

**software**
For camera control, image acquisition and archiving of images in various file formats PCO provides the software application Camware (Windows 7, 8 and later).

A camera SDK (software development kit) including a 32 / 64 bit dynamic link library for user customization and integration on PC platforms is available for free.

For camera interface drivers and a list of supported third party software please visit www.pco.de.
